

## Medic4All Announces the Release of Five New Telemedicine Products

**Thursday, November 03, 2005, Zug, Switzerland** - Medic4All completed work on five new telemedicine software and hardware products to enhance its wireless medical monitoring solution.

**MiniClinic™ Event Recorder Wrist Unit** – The modified version of the MiniClinic™ measures single lead ECG, stores up to 5 ECG events and post event 30 seconds record, wirelessly transmits the data and also features low power consumption.

**MRAS (Measurement Remote Access Server)** – A Medic4all server software package that operates multi telephone line modems and receives measurements simultaneously from multiple MedicGate™ devices via telephone lines and stores them in the database. Features support for up to 32 PSTN input lines and integration with 3<sup>rd</sup> party applications (XML protocol).

**MedicGate™ Data** – A modified version of the MedicGate™ Vital Signs and audio conference PSTN gateway, The MedicGate™ Data is dedicated only for medical data transmission to the monitoring center via conventional telephone lines and wireless communication with Medic4All's monitoring devices. The MedicGate™ Data features advanced digital data transmission capabilities.

**Monitoring Center Application** – A new software version for the telemedicine medical monitoring center with added physician subscription service, longer ECG recording, improved reporting management, friendly graphical user interface and enhanced communication hardware support.

**MiniGate™ Application** – A new software version for the MiniGate™ program featuring self monitoring functions, broad networking support, improved reporting management (PDF), better performance, improved customization options, additional languages support, enhanced storage structure, e-mail communication and longer ECG recording display.
